Dear Reader

WizLAN's comprehensive range of fiber optic connectivity products has expanded over the years at the speed of technology and changing markets needs.

With the development and facilitation of service applications, traditional broadband telecommunications markets have branched out, creating a need for specialized products, with enhanced features and advanced management and control capabilities. Rising to this challenge, WizLAN is launching a newly segmented platform of solutions tailored to specific market and technology requirements for Metro Connectivity, Residential Access, Office Access, Control & Security, and Industrial Connectivity.

In this issue of WizLAN News, the company introduces its focused solutions, announces new products and end-of-sales for older products.

Focus on Metro Connectivity

WizLAN's Metro Connectivity products are a valuable investment for service operators. They provide a professional, reliable and robust infrastructure for metro connectivity, and ensure high availability of services and security.

WizLAN's Metro Connectivity products include the reliable Media Wizard fiber optic connectivity centers (with a new look!), WizLAN's newly designed Wiz-Metro line of ruggedized Telco grade products, and selected Wiz-Lite-Managed products. Geared for leased links, last mile access, point-to-point, daisy chain and ring fiber optic networks, these products provide enhanced functionality, advanced security and control capabilities, and in/out-of-band management access.

Focus on Office Access

In the modern office environment, where each person uses several LAN devices simultaneously (IP telephone, laptop, workstation and shared network devices), there is a growing demand to bring multiple access ports to the desk. WizLAN's Office Access products offer a cost effective distributed network architecture solution. Utilizing a single link to the network center you create bandwidth aggregation and efficiently lower the cost of network ownership.

Products include a choice of access devices and installation switches for wall/cable trunks and sub-floor tanks. They offer multiple access ports, daisy chaining, advanced management, access control, and PoE support. The Media Wizard modular connectivity centers and Wiz-Stack multiple conversion devices take care of the corporate network center.

WizLAN also continues to support a range of AS400 products for traditional organizations.

Focus on Residential Access

WizLAN's Residential Access products offer reliable service orientated devices, providing different levels and combinations of services. They will bring service operators to the forefront of the LAN to Home market, by offering subscribers a greater number of services, including broadband access, IP telephony, traditional and digital TV and home alert services. This suite of self contained devices and residential access units support management features that can significantly reduce upgrade, maintenance and installation costs.

Features include built-in firewall and router, direct access broadband ports (with VLAN support), an integrated SIP Gateway, F/O CATV receiver and additional service connections used to send SNMP traps to alert a call center in the event of a break-in to the home, fire, flooding, or an emergency call.

Focus on Control & Security

WizLAN Control & Security products provide a sophisticated, wide span fiber optic network infrastructure for toll roads; traffic control, security and surveillance systems supported by broad network IP based applications.

[For a list of new Control & Security products, see "NWS060608-1_FD.PDF" \(email attachment\)](#)

Focus on Industrial Connectivity

WizLAN's offerings for the industrial and extended network environment are based on robust industrial technology, with different versions supporting extended temperature range 0°C-60°C (ETR), industrial temperature range -20°C-70°C (IND), or MIL-Spec capabilities.

These products are available with advanced link verification features, fiber protection and remote management capabilities.

Announcing New Products

In view of the rapid changes in technology, customers are changing the way they manage their networks and service operators are looking for new, innovative ways to address their customer's changing needs.

Committed to keeping up with these changes in technology and market trends, and focused on customer demands, WizLAN is expanding product lines to provide new technology solutions with advanced functionality and management capabilities.

Whether you need a solution for Metro Connectivity, Residential Access, Corporate/Office Access, Control & Security or any combination of these markets, we are certain that you find our new products beneficial to your customers.

Announcing End-Of-Sales for Older Products

WizLAN is committed to keeping up with the changes in technology and market trends, and to focusing on customer demands. Just as older technology is phased out with the availability of new, advanced technology, WizLAN is enhancing its product lines, replacing older products with readily available products based on new technology and advanced features and management capabilities.

We hope that you find the replacement products suitable and beneficial to your customers.
